

groovtube

The ultimate device to teach breath control and oral motor skills for all ages. The GroovTube is a unique device which makes breathing and oral motor skills visible and analysable on a fun way. It turns your breath into real-time image effects, for use by people with breathing, speech, or oral motor disabilities.

The GroovTube device is connected to an iPad. Its use is simple: inhale or exhale into the mouthpiece of the GroovTube, and airflow is recorded and converted into visual effects in an app specially developed for the purpose.

The hardware consists of an input device, an interface, and connection cables. In addition, several mouthpieces are available. You can hold the GroovTube in your hands, or you can place it on a tripod.

Apps

There are several apps for different purposes and different ages. You can download them for free in the App store. The apps have various training levels and game elements. This is to make the exercises challenging, and increase the motivation of the user. View instructional videos on www.groovtube.nl

No other devices has helped me more to challenge a young child to exhale as long as possible.

Maaike, a speech therapist

The GroovTube was developed at the initiative of Rijndam Rehabilitation Institute, in collaboration with the assistive technology company AudioRhoon.

For whom?

The device is suitable for breathing training and oral motor training and can be used in a therapeutic setting as well as at home. In rehabilitation institutes the GroovTube is used in respiratory therapy, speech therapy, occupational therapy and physiotherapy.

In practice

In practice, the use of the GroovTube makes the patient aware of his respiration. Respiratory muscle training can result in maintaining better condition of the lungs, and a better cough in children with neuromuscular disease.

BCA (Breath Controlled Apps)

The apps provide several possibilities and levels of training for breathing techniques, among others:

- enhancing conscious inhaling and exhaling;
- visualising the intensity of inhaling and exhaling;
- teaching a rhythm for inhaling and exhaling.

Visual feedback of breathing provides a major enhancement of the training effect of exercise. The element of play gives extra motivation to the patient. Reward is instantaneous.

Instantly get started with the starter pack

When you purchase GroovTube you can start immediately. Download the free apps from the App Store and connect the GroovTube with the iPad. The starter pack includes:

- GroovTube with removable handle
- 8 mouthpieces with bacterial filter
- iPad MIDI interface with MIDI to lightning cable (optional adapter to 30-pins connector available)
- AC adapter
- Manual
- Robust storage case

The results of each training session are saved automatically. This makes it fun for children who need to keep practicing on a regular basis.

Irma, a physiotherapist

Discover the apps in the App Store:

GroovTube

Due to detection of breathing strength and duration a self-chosen photo will deform. The exercise gets tougher if you increase the threshold.

FairHammer

This app is based on the game 'High Striker'. Inhaling or exhaling will move the 'mercury' toward the top of a thermometer-style graphic.

Quezaida, 8 years

45

"I really like to make a selfie and then blow up this photo. The game FairHammer I like the most!"

BilliartBreath

Breathing strength is used to move billiard balls, but you also need agility to accomplish. This will increase breathing awareness. (biofeedback).
